

BART 3.0 SOFTWARE RELEASE

SCHEDULED RELEASE: MARCH 2017

Features due for release in this update are;

3CREATE VISUAL EDITOR: Our brand new visual editor is a simple to use, drag, drop and resize user interface for creating high impact and quality digital signage layouts in seconds. Perfect for non-technical professionals and occasional users.

QUICKDROP CONTENT UPDATE: QuickDrop is a solution that enables single-click, drag and drop updating of image, presentation or video content within Tripleplay’s Digital Signage Platform. QuickDrop also links to our Enterprise Video Platform allowing drag and drop upload of VOD and Music for access on STB, smart TV, laptop or mobile platforms.

AUTHENTICATED WEBPAGE SUPPORT: We have enabled the display of authenticated web page content as an HTML resource within a digital signage layout. This feature now allows the display of internal business webpages and feeds within digital signage content layouts.

NODE HIERARCHY: Our new simple visual hierarchy builder allows system administrators and installers to quickly identify unallocated end points and move them between service groups. Our new interface has consolidated a number of features that were previously disparate, making a much simpler, smoother user experience.

GENERAL: Many User Interface improvements, security and reliability fixes and enhancements to the platform.

ROADMAP FEATURE HIGHLIGHTS IN 2017

Tripleplay is also developing the following, scheduled for release in 2017 in our Caveman 1.0 release.

- System on Chip (SOC) support for NEC’s Raspberry Pi compute model.
- SOC integration into the LG WebOS 3.0 platform.
- SDK for video streaming solution for use in high density WiFi environments (stadia, arena etc).
- Citrix media playback.
- Further integration into Triple Jump EPOS and RMS.
- Standard 4K Amino STB support.
- Brand new themes for MVP, MMA and Interactive IPTV Portal.
- Perimeter Board support for stadia.

**All software and feature releases are subject to change.*
